

ROBOTIC PALLETISER

FEATURES

- Simple, easy to use
- Smoother, faster - less wear and tear
- Guaranteed production consistency
- Always available - never lets you down
- Fewer moving parts - less to go wrong
- Works in compact / tight production spaces
- Future proofed - works and grows with you
- Handles even the highest production requirements
- Overcome manual handling issues

Reliable, consistent stacking

Buffaload robots are especially adapted for palletising and other pick & place duties. Even your best employees can't compete with a Buffaload robot; The robots are developed especially for high-speed tasks with heavy payloads.

Presenting the product to the stacker ensures accurate stacking every time. We manufacture various in-feed solutions to present your product to the Buffaload robot including bag kickers, bag presenters, roller tables & more.

We carry out an initial site survey to determine your requirements, then work closely with you to ensure you obtain maximum productivity from your robot. Presenting the product to the stacker ensures accurate stacking every time.

We carry out an initial site survey to determine your requirements, then work closely with you to ensure you obtain maximum productivity from your robot.

Niagri manufacture bag kickers, bag presenters, roller tables, conveyors, elevators & more.

This machine is suitable for the following crops:

Potatoes & many other products which require accurate stacking
