- Available in painted mild steel & 304 grade stainless steel

Precision which will last for years

The Niagri Diameter Grader separates very accurately by diameter.

This machine is designed and built to withstand the continuous use of carrot and parsnip production, minimising downtime and interruptions.

A productive machine when it comes to grading carrots and parsnips. The key features of this machine are the very low drops, which minimise damage to the crop and the easy change of diameter settings.

This grader can be manufactured in painted mild steel or 304 grade stainless steel.

A full range of in feed and out feed solutions are also available for this machine.

This machine is suitable for the following crops:

Carrots

Parsnips
