Mobile cleaning unit for a range of vegetables

Niagri Forwarding units are designed to be used as a chaser unit to clean and transfer crops directly from the harvester, incorporating various cleaning systems throughout the machine.

Cleaning the product whilst at the field saves on unnecessary logistics transporting soil to and from the wash plants.

Soil can be stored on the machine, then deposited back in the field whilst returning to the harvester.

Loading hoppers of 1.8m wide to 2.4m wide. Various cleaning configurations of traditional webs, grid webs, hedgehog belts, stars, coils and Easy cleaners are available.

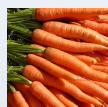

Machines manufactured to order.

Specifications to suit customer requirements.

This machine is suitable for the following crops:

Potatoes

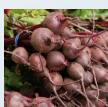

Carrots

Parsnips

Onions

Red Beet
