- Automatic flow control
- Fall breaker as standard

## Leave soil at the field where it was harvested from

Niagri Cleaner Loaders are designed to transfer crops from field trailers to bulkers at the field side. Cleaning the product whilst at the field saves on unnecessary logistics.

The machine can be configured with various cleaning systems dependant on your particular crop and conditions. Loading hoppers of up to 2.4m wide give high capacity loading into the cleaning systems. With variable speeds throughout the machine you can control the level of cleaning.

Dirt is conveyed out the side of the machine, ready to be incorporated back into the site it was harvested from. Optional cleaning configurations available to choose from including traditional webs, grid webs, hedgehog belts, Easy cleaners, stars and coils.

Machines manufactured to order.

Specifications to suit customer requirements.

This machine is suitable for the following crops:

Potatoes

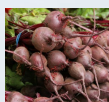

Carrots

Parsnips

Onions

Red Beet
