## Root Polish 25 - Fast polishing for a range of root vegetables

The Niagri Root Polish 25 is an ideal polisher for either the smaller grower or farm shop, who require a simple washing & polishing system for a range of root vegetables or as a sample polisher for the larger grower.

The Root Polish 25 only uses clean water, therefore there is no cross contamination from using dirty water, giving the product a longer shelf life. The carefully configured brushes clean and polish the product giving a superior finish. This machine also removes minor skin blemishes, allowing the product to be upgraded.

Load the hopper with a mix of crops including carrots, parsnips, swede, red beet and salsify. Start the machine. Once the product has been washed simply lift the quadrant to unload onto the inspection table or choose from the various optional extras. The crop can then be loaded into a crate or straight into bags with the optional bagging attachment.

See overleaf for optional extras.

This machine is suitable for the following crops:

Potatoes

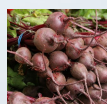

Carrots

Parsnips

Swede

Red Beet
