- Uses domestic size water supply
- 2m, ½" water hose + 1m, 2" discharge hose
- 2m cable & 13amp, single phase plug
- Low running costs

25kg fast washer for potatoes

The Niagri Cleanwash 25 is an ideal potato washer for either the smaller grower who requires a simple washing system or a sample washer for the larger grower. The Cleanwash 25 only uses clean water, therefore there is no cross contamination from using dirty water, giving the product a longer shelf life.

Wash 25kg samples in just 2 ½ minutes. Load the hopper with potatoes and start the machine. Once the product has been washed simply lift the quadrant to unload onto the inspection table or choose from the various options overleaf. From there the product can be loaded into a crate or straight into bags with the optional bagging attachment.

All machines are available in painted mild steel or 304 grade stainless steel. Manual or automatic unload. Timed systems & discharge conveyors are also available upon request.

See overleaf for optional extras.

This machine is suitable for the following crops:

Potatoes

[For other root vegetables see our Sample Polishers](#)
