Remove tops & tails from parsnips accurately

Niagri Top 'n' Tailers are designed to give accurate top and tailing with minimum labour involved.

Operatives place the crop onto the flighted belt, ready to go through the twin blades to be topped & tailed.

A special brush mechanism finally positions the parsnips to obtain optimum topping every time.

Two main configurations:

1. Two tier conveyors with intake on bottom belt, trimmed parsnips fed onto the top belt
2. Two tier conveyors with intake on top belt, parsnips delivered down to bottom belt

Individually driven belts with stainless steel blades. Hinged access hoods for easy maintenance & cleaning down.

The above are the two main configurations, however lines can be designed to suit the customer.

This machine is suitable for the following crops:

Parsnips
