## Extra cleaning built into your harvester or intake

The Niagri Easy Cleaner has been designed to clean a wide range of root crops. Fitting the unit into an existing machine, such as a grader or harvester can dramatically increase the cleaning capacity of your existing machine.

The unit has a series of extraction rollers. Each pair consists of deformable segmented fluted rollers. The smaller clod roller is sprung loaded to extract large misshaped objects.

The operator can easily adjust the clod roller height and rotation from a central control box. The unit can be used on a wide range of crops.

Machines manufactured to order.

Specifications to suit customer requirements.

This machine is suitable for the following crops:

Potatoes
