

LEAF EXTRACTORS

FEATURES

- 2 Progress rollers
- 6 Pairs contra rotating rollers
- Widths up to 2.4 meters to suit individual requirements
- Heavy duty geared drive
- Recycled oiling system giving longer life to bearings & gears
- Retrofitted into existing lines

Remove tops and leaf from crops such as carrots, parsnips and red beet

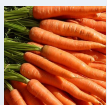

A series of progress rollers and contra-rotating rollers remove the foliage from the vegetable, without causing damage to the crop.

Effective when placed before the washing & grading process to avoid blockage problems further down the line. Manufactured to a very high standard to withstand continuous use in carrot and parsnip production.

This machine can be manufactured as a retro fit unit to be incorporated into your existing line or can be manufactured as part of a more comprehensive line.

Washing and processing equipment also available.

This machine is suitable for the following crops:

Carrots

Parsnips
